

**Non-Alphanso Mango pulp**

Totapuri Mangoes (*Magnifera indica*) are oblong with prominent beak in shape and about 6 - 8 inches long. The skin of the fruit is thick and green, yellow or a fanciful combination of these colours, but is inedible. There is a central large seed surrounded by the pulp, which ranges from pale to bright yellow. The mango has a rich aromatic flavour and is delicious in which sweetness and acidity are delicately blended. It is an excellent source of Vitamin A and C..

Product : Totapuri Mango Pulp / CAN

**Packaging Specification: 3.1 Kg. [A10 size] x 6 Cans per Carton, Net Weight 18.6 Kgs.;**  
**1000 Cartons in 20 ft. Container.**

Sr.No.	Test / Parameter	Limits	Result
<b>A] Physical, Chemical &amp; Sensory Quality :</b>			
1	°Brix at 20°C (Refractometric)	Min.14	
2	pH	3.5-4.4	
3	Titration Acidity % at pH 8.1 as C.A.	0.30-0.80	
4	Consistency cm /30 sec. at 25 ±2°C (Bostwick)	7- 14	
	Viscosity cp (BrookField)	3000-10000
